Abstract (en)

[origin: EP2757052A1] The bottle has a cylindrical tube (2) comprising an open end (21) to authorize filling of the bottle. A stopper (1), made of plastic material, closes the tube in a sealed and inviolable manner. The stopper includes a cylindrical part i.e. flange (10) at an end to cooperate with the tube. The flange comprises arrangements (100) on its internal wall to hermetically surround an external wall of the open end of the tube. The stopper includes an irreversible rupture zone located on a truncated closed part (11) of the stopper non-cooperating with the tube and allowing opening of the bottle.
