Abstract (en)
[origin: EP2757219A2] The device (1) has a motor (5) and a gearbox (7) provided with a gearbox frame (9), where a drive housing (3) receives the motor and the gearbox. The gearbox frame is accommodated in a form-fitting manner in the drive housing. An elastic intermediate layer (13) is arranged between form-fitting surface (11) of the drive housing and the gearbox frame. The drive housing includes pins arranged to engage blind holes (17) formed in the gearbox frame, where the intermediate layer is adapted to the outer contour of the gearbox frame.
