Abstract (en)
[origin: EP2757319A1] The home appliance device (12) comprise a partially transparent plate unit (14) and a coating structure (16) provided on the disk drive unit. The coating structure has, in first (22) and second (24) partial regions, a main plane of the plate unit at right angles to a main plane of different opacity. The coating structure is transparent in the first partial region, and has a shade in the first and second partial regions. The first and second partial regions are formed by the same material, and have different thicknesses. The coating structure is partially formed by an enamel-like material. The home appliance device (12) comprise a partially transparent plate unit (14) and a coating structure (16) provided on the disk drive unit. The coating structure has, in first (22) and second partial regions, a main plane of the plate unit at right angles to a main plane of different opacity. The coating structure is transparent in the first partial region, and has a shade in the first and second partial regions. The first and second partial regions are formed by the same material, and have different thicknesses. The coating structure is partially formed by an enamel-like material, and extends with respect to the main plane over the entire disk drive unit. The second partial region is provided as an operating and/or a display region. An independent claim is included for a method for preparing a household appliance device.
