Abstract (en)
[origin: EP2757340A2] The radiator (10) has a heat exchanger (12) which is positioned in housing (11) to supply coolant to a gaseous medium flowed around pipes. An inlet (13) is provided to supply gaseous medium into housing through a flow enter side portion (14) of heat exchanger. An outlet (15) is provided to discharge gaseous medium from housing through a flow withdraw side portion (16) of heat exchanger. Perforated plate-like flow comparison moderation elements (18,19) are positioned in a flow direction of gaseous medium seen from upstream of flow enter side portion.
