Abstract (en)

[origin: EP2757535A1] The device (10) comprises a supply unit (12) for supplying notes of value. A stacking unit (14) stacks the notes of value and a receiving unit (16) receives a thin-walled transport container. A stuffing unit (20) transports the stacked notes of value into the transport container in several successive filling steps. A closing unit (22) closes the thin-walled transport container. The receiving unit includes a contact sensor which generates a signal upon contact with a bottom of the transport container. The closing unit closes the transport container dependent on the signal.
