Abstract (en)
[origin: EP2757749A2] Methods, devices, and systems for managing a wireless mesh network are described herein. One method includes monitoring an outgoing data queue length of a node of a wireless network, determining that the outgoing data queue length exceeds a particular threshold, reducing a video quality associated with the outgoing data queue, and sending a notification to an additional node of the wireless network to reduce a video quality associated with an outgoing data queue of the additional node.
