Abstract (en)

[origin: US2013075401A1] A non-detachable pull tab for a beverage container has a nose end, a lift end opposite the nose end, and a central webbing of a metallic material between the nose and lift end. The central webbing has a hinge region, a rivet island surrounding a rivet hole, a void region at least partially surrounding the rivet island, and a grab portion between the first void region and the lift end. The grab portion has an upper surface, a lower surface, and an aperture therethrough. The aperture is defined by a circumferential wall of the grab portion extending from the upper surface to the lower surface and includes a first segment of a reworked portion of a burr.
