Abstract (en)
[origin: US2013062379A1] A bike rack may include an elongate body having a first end portion and a second end portion, a rear wheel receiver connected to the body adjacent the second end portion, and a fork mount device connected to the body adjacent the first end portion. The fork mount device may include a body and a pair of retractable axle portions configured to move between a retracted position in which the axle portions are substantially contained in the body, and an extended position in which the axle portions extend sufficiently to engage axle holes of a 15QR bicycle fork.
