Abstract (en)
[origin: WO2013041442A1] A bobbin winding machine with a plurality of winding stations (5.1-5.4) which are arranged along a bobbin winding spindle (2,3) for winding a plurality of threads into bobbins (6.1-6.4) is described. The winding stations are assigned a traversing device (7) which has a flyer traversing unit for each winding station (8.1-8.4). The flyer traversing units are driven jointly and for this purpose have in each case a drive wheel (11.1-11.4) which is coupled to a driven driving wheel (14) via a toothed belt (12). According to the invention, the toothed belt is coupled to the toothed drive wheels and to the toothed driving wheel via a toothed profile side (27).
