Abstract (en)
[origin: WO2013041321A1] The invention describes a measuring device having at least one corrosion-resistant process-oriented surface, wherein at least one joint between a component (1) which is composed of an electrically conductive material and a component (2) which is composed of an electrically insulating material is sealed by a sealing means (2), and wherein the process-oriented surface is provided with a coating (4) in such a way that at least the sealing means (3), a transition region between the conductive component (1) and the sealing means (3), and a transition region between the insulating component (2) and the sealing means (3) are covered by the coating (4).
