Abstract (en)  
[origin: WO2013043759A2] A system and method of converting currency items to credits that are redeemable in a variable value transaction are disclosed. Converting currency items to credits allows the credits to be used for satisfying an initial balance or a remaining balance of the variable value transaction involving a piece of media content. The conversion may include receiving a unique customer identifier identifying a customer, receiving a unique identifier of the currency items, and determining whether the currency item is valid for being converted to a credit. If the currency item is valid, a conversion ratio of the currency items to credits may be retrieved and a quantity of the credits may be calculated from the currency items, based on the conversion ratio. The quantity of the credits may be issued to the customer in a credits database. Invalid currency items may be rejected for conversion to the credit.
