Abstract (en)
[origin: WO2013043755A1] A system and method of predicatively accruing a credit in a variable value transaction are provided. The variable value transaction may involve a piece of media content and include an initial balance and a remaining balance. The initial balance and the remaining balance may be dependent on the piece of media content and when the variable value transaction is completed. Credits may be accrued for a predicted redemption of the credit for the remaining balance, depending on the availability and applicability of the credits. A payment card may also be processed for some or all of the remaining balance. The remaining balance may not be known until the variable value transaction is completed. A pending revenue amount may be determined based on the accrual of the credits.
