Abstract (en)

[origin: WO2013041483A2] Fire detectors are locally installed units which are mounted, for example, on a ceiling or on a wall and are used to detect a fire in the surroundings thereof. The invention proposes a fire detector 2 for a fire detection system 1 for monitoring a monitoring area 3, having an interface 12 for communicating with the fire detection system 1, having a sensor device 7 for recording the monitoring area 3 in a spatially resolved manner in an IR wavelength range and for outputting sensor signals, having an evaluation device 9 for determining a fire state by evaluating the sensor signals from the sensor device 7, wherein the fire state is transmitted to the fire detection system 1 via the interface 12, wherein the sensor device 7 comprises a sensor array which outputs an array of measured values as sensor signals.
