Abstract (en)

[origin: EP2759346A1] The shredder has a top-mounted cutting unit (1) that comprises an electric motor driven cutting roller pair (6) which is located between a receiving slot (4) and an outlet opening (5) of a housing (2). A thickness sensor (7) is arranged for a material to be crushed between the cutting unit and a catchment area (19) of the roller pair. The sensor is projected into the slot. A gap (9) is formed between the active portions (10,101) and the passive portions (11,111) of the sensor and remains constant in a possible pivoting movement (13) of the active and/or passive portions.
