Abstract (en)

This invention discloses a multi-tool for fasteners includes a housing (1), a power device (2), a transmission device (3) coupled to the power device mechanically, an output device (8) coupled to the transmission devices and a switching device which can be switched between at least two operating modes. In a first operating mode, the output device moves in a reciprocation manner without rotation along an axial direction, and in a second operating mode, the output device rotates with an intermittently increased torque along a circumferential direction. The switching device includes a limiting member (9;10;11;12) and the limiting member can be moved between a first position and a second position, wherein, in the first position, the output device is in the first operating mode, and in the second position, the output device is in the second operating mode.
