Abstract (en)
[origin: EP2759671A2] The fan (1) has a fan housing (2) fastening on an inner space-side of a blind frame (25) of a window or a door. Each of a bottom wall (3), a rear wall (5) and a ceiling wall (4) connects side walls to each other. A swivel-movable volumetric flow delimiter is formed in an air flow path (13) in an inner space (12) of the housing. The air flow path is interrupted in the housing inner space to a stop element by a stop of the delimiter. The bottom wall is formed over a greatest part of an extension portion to the rear wall in a rear wall direction in an inclined rising manner or arcuate shape. An independent claim is also included for a window fan assembling set.
