Abstract (en)  
[origin: WO2013049717A1] To control shelf life of package produce, a first produce is placed inside an inner gas- permeable package. The inner gas-permeable package is sealed, thereby creating a first package atmosphere inside the inner package. A second produce is placed inside an outer gas-permeable package. The sealed inner package is contained within the outer gas-permeable package. The outer gas-permeable package is also sealed, thereby creating a second package atmosphere inside the outer bag. The first package atmosphere controls the shelf life of the first produce, and the second package atmosphere controls the shelf life of the second produce. The produce inside each inner and outer bag may include one or more vegetables, fruits, and nuts.
