Abstract (en)  
[origin: TW201313162A] The invention relates to a bracket-side sleeve 5, more particularly to a bracket-side sleeve with a U-shaped or approximately U-shaped cross-section, comprising at least one bracket-side adapter 6. The bracket-side adapter 6 is connected to the bracket-side sleeve 5 on one wall of the bracket-side sleeve 5 by means of at least one plug connector 7, in which the plug connector 7 mainly consists of a pocket 8 and a tongue 9. The pocket 8 is provided on the wall 5a, and the tongue 9 can be inserted into the pocket 8 and extends transversely to the longitudinal extension of the bracket-side sleeve 5. The tongue 9 lies in the region of a recess 10 of the bracket-side adapter 6, wherein the recess 10 extends perpendicular to the insertion direction of the tongue along with a first stop portion 10a and a first securing tenon 10b. The pocket 8 and the recess 10 respectively are designed to be mirror-symmetrical manner to the tongue 9, such that the recess 10 is provided with two stop portions 10a located adjacent to the lateral side of the tongue 9 and leaning against the two correspondingly arranged limiting strips 8a and 8b of the pocket 8. The recess 10 further has two securing tenons 10b leaning against the correspondingly arranged limiting strips 8a, 8b of the pocket 8 such that the tenons engage with the pocket 8 from the back .
