Abstract (en)

[origin: WO2013045106A1] The invention relates to means for applying to the shuttering face (3) of concrete shuttering (2) for producing concrete components having a high-quality concrete edge zone, wherein the means has a hydrogel (5) as a substantial constituent. Automatic regulation of the water-cement ratio in the concrete edge zone and therefore an improvement in the concrete and surface quality are achieved therewith.
