Abstract (en)

[origin: WO2013045056A1] The invention relates to a security element comprising an optically variable structure that has an embossed structure, said embossed structure comprising a plurality of non-linear, elevated embossed elements. Furthermore, the optically variable structure comprises in at least a first partial region at least one first additional information that is obtained by varying the geometric shape of the non-linear embossed elements using shadowing effects. According to the invention, the at least one first additional information is obtained by at least a partial section from the geometry of the respective non-linear embossed elements so that said at least one partial section is missing in the respective geometric shape of the non-linear embossed elements.
