Abstract (en)

[origin: WO2013045839A1] The invention relates to a method (200) for the automated detection of incidents that occur on a vehicle during its use, said method (200) comprising the following steps: detection (202) of an incident by at least one sensor disposed on said vehicle, transmission (206), from said vehicle to a remote site, known as a central site, of at least one item of data relating to said detection, through a wireless communications network, determination (210) by said central site of an item of data, known as an identifier, relating to a user of said vehicle during said detection, and registration (210) of said item of data relating to the incident in conjunction with the identifier of the user. The invention also relates to a system implementing such a method and an application of such a method and such a system to the automated hiring of vehicles.
