Abstract (en)

[origin: EP2762212A1] The piece has a basket (400) with a housing (401) to receive a distal end of a stem (20) of a stick (1). A locking ring (300) surrounds a part of the housing. The housing is defined by a wall (404) supporting a leg (406). An end (407) of the leg includes a pin to extend inside the housing. The leg takes several configurations corresponding to various radial positions of the pin such that the ring is formed to limit the radial displacement of the end of the leg toward outside of the housing when the ring is assembled on the basket.
