Abstract (en)  
Described is a machine tool (1) for machining a sheet (2) of glass or the like having at least one edge (3), comprising a frame (4) for supporting the sheet (2) in a substantially vertical position; a station (6) for machining the sheet (2); a train (7) of cup grinding wheels for machining the edge (3) in the machining station (6); motor driven rollers (5) for moving the sheet (2) in a direction of movement (X), towards and away from the machining station (6); a computerised control unit (16) in communication with the train (7) of cup grinding wheels and with the rollers (5) designed for controlling the train (7) of cup grinding wheels and the rollers (5); the machining station (6) comprises a pickup suction cup (15) which can be activated on the sheet (2) for picking up the sheet (2); the suction cup (15) is rotatable about an axis of rotation (R) transversal to the direction of movement (X) for rotating the sheet (2) about the axis of rotation (R); the train (7) of cup grinding wheels is movable relative to the suction cup (15) for performing machining operations on the sheet (2) using the cup grinding wheels.
