Abstract (en)

A wrapping machine, for wrapping with plastic film (2) products arranged in a stack (3) on a stand (4), comprising a rotary platform (5), rotatable round a vertical axis (5a); a fixed supporting structure (6), comprising at least a vertical upright (7) next to the platform (5); a horizontal arm (8), supported by the upright (7), cantilever-style above the platform (5); and a presser (9), also supported by the horizontal arm (8), freely rotatable round a vertical axis (9a) of rotation, and movable between a first, operating position in which, associated with the stack (3), it helps to keep the products in the stack neat, and a second, non-operating position in which said presser (9) is distant from the stack (3). A sheet extender device (10) is integrated in the vertical structure (6) and is supported by it on the same side relative to the platform (5), for placing a sheet of plastic film (2) between the top of the stack (3) and the presser (9).
