Abstract (en)
The present invention relates to a thermoforming machine comprising conveying means (10) for conveying a band in a forward movement direction of the machine, and at least one guide device (110) for guiding the movement of the conveying means (10) in the forward movement direction. The guide device (110) comprises a base support including at least one profile (4) and at least one lower guide element (2) attached to the profile (4), at least one upper guide element (1) which is detachably attached to the base support, and a channel which is defined between both guide elements (1, 2), and which is configured to allow the guided forward movement of the conveying means (10) therethrough to drive said band.
