Abstract (en)

[origin: EP2762575A1] The method involves providing animal skin (1). The animal skin is split into a grain split (4) and a flesh split (6). The split grain split and the flesh split are tanned. A solidification layer (7) is applied to a grain side (2) and onto a flesh side (3). An additional mechanical strength is given to the animal skin by the solidification layer during splitting. A textile or non-woven layer is made from the fibers, such as fabrics, knitted fabrics, synthetic fibers, particularly nylon or polyester, natural fibers, particularly cotton or wool, carbon fiber, particularly aramid fiber. An independent claim is included for a leather intermediate product during a process for manufacturing leather.
