## Abstract (en)

The gauge (10) has a module including an actuator and a hinged jib, where the gauge is arranged in three-dimension. A case (20) is intended to be in support against an upright (50) of an opening (40), and an articulated element (30) is arranged on a case in rotation around a vertical axis (Z) when the case is positioned against the upright of the opening, and adapted to reproduce movement of the jib relative to the module. The movement allows driving of a beating flap (70) between a closed position and an open position. An independent claim is also included for a method for verifying dimensions of a beating flap.

## Abstract (fr)

Gabarit (10) de pose d'un ensemble de motorisation de volet battant sur une ouverture (40). L'ensemble de motorisation comprend un module incluant au moins un actionneur et un bras mobile sur ce module et le bras comprend une extrémité de fixation au volet et une extrémité de fixation au module. Ce gabarit comprend un premier élément indicateur (30) de la position d'au moins une des extrémités du bras mobile par rapport à la fois au volet (70) et à un montant (50) délimitant l'ouverture.
