Abstract (en)

[origin: EP2762664A2] The corner guide (3) has a flexible deflection element (6) arranged at a longitudinal side of an angled guide (10), and holding lugs (15, 16) arranged in undercuts (13, 14). The angled guide is narrower than a guide slot (9) and supported by a filler part (17). Width of the filler part and angled guide are common with respect to width of the guide slot at a front end of the undercuts. The filler part and/or the angled guide have inherent elasticity against the walls of the guide slot. A bracket of the filler covers the guide slot projecting portion of the angled guide. The holding lugs are designed as nose-shaped projections.
