Abstract (en)

[origin: EP2762674A2] The wing has a stator that is rotatably arranged with a rotor (10) having several guide grooves (16). The wing unit is provided with a high pressure side and a low pressure side. A side wall (30) is formed on the high-pressure side and a side wall (34) is formed on the low pressure side. The fins (28) are connected to each other by several lateral boundaries of the fluid channels (26). The side wall (22,34) are arranged offset in the direction of movement of the wing unit, so that the high-pressure side and the low pressure side are partially covered by the side walls (30,34). An independent claim is included for wing cell device.
