Abstract (en)
The solution relates to a roof-penetrating air outlet, with an inlet duct (10) for fresh air located at the external side of the roofing, and an outlet hole (41) at the internal side of the roof decking, while the connection of the air outlet with the roof decking is protected from weather conditions by sheet metal flashing, preferably standard roof flashings; the air outlet may be installed in any place of the roof plane and it has no specific requirements as for shape and structure of the roofing.
