Abstract (en)

[origin: WO2012161576A1] Sandal, comprising a sole and at least one strip comprising at least two ends for fitting over a part of a wearers foot. At least one end has an end portion fitting through an opening in the sole, the strip extending substantially above the sole. A coupling element is provided fitted around and/or into at least part of said end portion, which coupling element prevents the end portion from being pulled through the opening in the direction of the top side and can be removed and/or collapsed for passing the end portion through the opening and/or wherein the end portion is dimensioned such that in a first position the end portion can pass through the opening from the top side to the bottom side and in a second position cannot pass through said opening.
