Abstract (en)  
[origin: GB2492156A] A kit of parts comprises at least one balloon of elastomeric material 31-35, a pack of sheet material having a main leaf 14 and at least one adjoining leaf 11-13 delimited by a fold line, such that the balloon or balloons 31-35 are enclosed between the main leaf 14 and the folded over adjoining leaf or leaves 11-13 for packaging and presentation at point of sale, and at least one patch 21-25 carried as a peelable patch on one surface of the pack. The or each patch 21-25 has its peelable surface provided with adhesive means and has an opening in a generally central region so that it may be removed from the pack and affixed to the balloon or one of the balloons after inflation to enable safe deflation. In this respect the patch should be fixed to the exterior of the balloon by pressing its adhesive peelable surface into contact with the exterior of the balloon so that it adheres to the balloon, and the balloon should then be punctured at a location inside the opening defined by the patch.
