Abstract (en)

[origin: WO2013050028A2] The invention relates to a print finishing method, comprising the steps of feeding sheet-type printing products, laminating, coating and foil-stamping the sheet-type printing products (D), the steps of lamination, coating and foil-stamping being carried out in treatment modules and the printing product (D) to be finished being first detected and aligned in every treatment module. The invention further relates to a print finishing machine for sheet-type printing products (D), comprising a sheet-conveying system (11) for the sheet-type printing product (D); a laminating device for laminating the printing product (D) with a laminating film; a coating device for coating the printing product (D) with a coat, and a foil-stamping device for transferring a transfer layer which adheres to a carrier film onto the printing product (D) in places intended to be imprinted. The laminating device (2), the coating device (3) and the foil-stamping device (4) each contain at least one section of the conveying system (11) and the sections of the conveying system are suction feedboards (21, 31, 41).
