Abstract (en)
[origin: WO2013050186A1] The invention relates to a system (A1, A2) for treating containers (1a, 1b, 5a, 5b), wherein the containers (1a, 1b, 5a, 5b) are treated by at least one first treatment unit (B1) of the system (A1, A2), and the containers (1a, 1b, 5a, 5b) are treated by at least one additional treatment unit (B2 - Bn) of the system, and wherein a measuring device (M1) determines, after or during the treatment in the first treatment unit (B1), at least one characteristic parameter for the geometric shape of the containers (1a, 1b, 5a, 5b), wherein at least one of the characteristic parameters for the geometric shape of the containers (1a, 1b, 5a, 5b) determined by the measuring device (M1) is taken into consideration for the control or for the adjustment of the at least one additional treatment unit (B2 - Bn) arranged after the measuring device (M1) and/or the sensors thereof.
