Abstract (en)  
[origin: WO2013050110A1] The invention relates to an apparatus (2) for providing film sheets (19) that are self-adhesive on at least one side, having a film dispenser (4), which provides a film strip (5) comprising at least one carrier film (8) and a film for use (7) that is self-adhesive on at least one side arranged thereon, the film for use (7) being divided or divisible into film sheets (19), a conveying device (37) being provided in order to convey the film strip from the film dispenser (4) together with the carrier film (8) on a guide track (10) to a removal station (20), at which the film for use (7) is removed from the carrier film (8). Provision is made for the removal station (20) to have a carriage which, at the end thereof opposite the film dispenser (4), has a separating edge (27), over which the carrier film (8) can be drawn by means of the conveying device (37), and to which an actuator (25) is assigned for displacing said carrier film along the guide track (10), and wherein the removal station (20) is assigned a gripper (36) which grips a film sheet (19) located in front of the separating edge (27), as seen in the conveying direction, and holds said film sheet (19) stationary, while the carriage (21) is displaced on the guide track (10) by means of the actuator (25) counter to the conveying direction of the carrier film (8) and, at the same time, the carrier film (8) is drawn away over the separating edge (27) for detachment from the film sheet (19). Furthermore, the invention relates to an application apparatus and to a method.
