Abstract (en)
[origin: WO2013050347A1] The invention relates to a laundry drum (1) having at least one laundry carrier (4) having a carrier comb (10), to which two carrier walls (5, 6) extending from the inner cylinder of the laundry drum (1) run. One aim of the invention is to create a laundry carrier (4) that is optimized for various treatment situations and/or different operation situations. In order to achieve said aim, at least one force-transmitting connecting web (11) is articulated in such a way on the insides (5a, 6a) of the carrier walls (5, 6) facing each other and the elasticity of the carrier walls (5, 6) is sized in such a way that, in the event of pressure application (30) to an outside (5a) of a carrier wall in accordance with operation, the carrier comb (10) moves toward the side (32) of the pressure application (30) while the laundry carrier (4) is elastically curved.
