Abstract (en)

[origin: WO2013050102A1] The invention relates to a piece of equipment (1) which has a ground contact device (4) for working on a ground region (5) located below the ground contact device (4) in the working position of the piece of equipment (1), a driving device which can be operated by an electric motor in order to produce a working movement of the ground contact device (4), an electrical energy accumulator (7), enclosed by a housing, for supplying the electric motor with electrical energy, and a covering device (9) for covering the housing and thus the energy accumulator (7), which covering device is arranged above the energy accumulator (7) in the working position. The piece of equipment (1) may for example be a tamper, a vibration plate, a roller or a breaker.
