Abstract (en)

[origin: WO2013050712A1] The invention relates to a method in which a layer (4) of insulating material and a facing plate (14) are positioned against a pre-existing wall (2). The method comprises the following steps of: a) attaching at least one layer (4) of insulating material to the pre-existing wall (2); b) installing pipes (12) or similar; and c) attaching a closing panel including a facing plate (14), such as to cover the insulating material attached to the pre-existing wall (2). Each layer (4) of insulating material includes at least one face having oblong recesses parallel to one another and extending from one edge to the other of the layer of material, said recesses being separated by raised areas having a planar surface forming a planar strip (10) extending parallel to the grooves from one edge to the other of the layer of material.
