Abstract (en)
[origin: WO2013050658A1] The invention concerns a connecting piece (1) for a flashing (6) of a pipe duct in a tiled roof. The invention is characterized in that the connecting piece (1) comprises a portion (1a) of hard plastics having a substantially even surface extending flash to a ridge plane of the roof tiles (5) and having a groove (2) being open away from the connecting piece (1) for receiving an upper end of the flashing (6) and extending along the whole length of the connecting piece (1), said groove (2) continuing at both of its ends straight downwards for receiving a fold (6a) formed at both sides of the flashing (6), as well as a flexible portion (3) of plastic rubber connected to the portion (1a) of hard plastics of the connection piece (1) and being shaped to correspond to an average profile shape of roof tiles (5) and having at its profiled free end an upwards directed wall (4) in the regions between the ridges of the profile, which end is intended to be positioned between the tiles (5) in the first row (5a) and second row (5b) of roof tiles at the ridge side of the pipe duct.
