Abstract (en)  
[origin: WO2013050466A1] The invention relates to a device (10) for handling coins (12), comprising a temporary store (14) for receiving, in a sorted manner, coins (12) that are supplied such that they are sorted, and comprising a retainer unit (18) for retaining the coins (12) that are received in said temporary store (14). When in a supply position in which the retainer unit (18) and the temporary store (14) have a first position relative to one another, said retainer unit (18) and temporary store (14) are arranged such that the retainer unit (18) occludes an issuing opening (36) of the temporary store (14); when in a relay position in which the retainer unit (18) and temporary store (14) have a second position relative to one another, said retainer unit (18) and temporary store (14) are arranged such that coins (12) stored in the temporary store (14) can be supplied to a coin store (32); and when in a return position in which the retainer unit (18) and the temporary store (14) have a third position relative to one another, said retainer unit (18) and temporary store (14) are arranged such that coins (12) stored in the temporary store (14) can be supplied to a return tray (34).
