Abstract (en)  
[origin: WO2013079329A1] The invention relates to a switching-device tripping apparatus for a switching device (1) has contact pieces (2, 3) that can be moved relative to one another. Relative motion between the contact pieces (2, 3) is generated by means of a transmission assembly. The transmission assembly has a pawl (7) in order to control motion of the contact pieces (2, 3) relative to each other. A first and a second tripping means (11, 12) are provided, which work against the same pawl (7) and drive the same pawl (7).
