Abstract (en)  
[origin: EP2765238A1] The coating station (2) has a rotary dryer (4) for producing hot and dry aggregates. An aggregate storage device (6) stores the dry and hot aggregates, and a metering device (8) delivers the aggregates stored in the aggregate storage device. A batch mixer (10) mixes the aggregates delivered by the metering device with a bitumen binder, so as to produce a bituminous mix. A bituminous mix storage device (12) stores the produced bituminous mix, where the batch mixer is raised relative to the metering device. A bucket lift (34) raises the aggregates between the metering device and the mixer.
