Abstract (en)

[origin: EP2765269A2] The selector (8) has an inactive leaf (2) and an active leaf (3) connected with a housing. A cam is rotatably mounted at one end to a cam plate. Another end of the cam plate interacts with traction units (12, 13) that are connectable to an actuating element perpendicular to axes (6, 7) of bottom door fasteners (4, 5). A displacement area of the actuating element is adjustable by the housing and a guided bolt is arranged from outside of the housing. The guided bolt is inserted into a displacement region of the actuating element.
