Abstract (en)

[origin: EP2765358A2] The grate i.e. hinged belt has two limbs (3, 4) hingedly connected together along a conveyance direction, where a burning surface is formed by the limbs in a combustion area in an operating position. The two limbs form a limb pair (7) in the combustion area, where a flow-through channel (8) is bounded to the two limbs. The flow-through channel includes an inner flow channel that projects through an opening of one limb, where the limbs include two hinge retainers (14, 15) for the articulated connection of the two limbs. An independent claim is also included for a burner.
