Abstract (en)

The invention concerns a device (103, 110) and method for creating a video in a vehicle (100) in particular for sending to a receiver, comprising an analyzer (110) adapted to assess a traffic situation from a captured image of the outside of the vehicle (100), and a multiplexer (103) adapted to join the captured image with recorded audio from a passenger compartment of the vehicle (100) and information about the assessed traffic situation as the video. Furthermore the invention concerns a receiver (107, 109) and method for playing a video comprising an output (109) adapted to output a video, wherein the receiver comprises a de-multiplexer (107) adapted to separate information about an assessed traffic situation from the video, and to determine whether to send an assistive message to the output (109) or not depending on the information about the assessed traffic situation.
