Abstract (en)  
[origin: EP2765654A1] The device (1) has a holder arm coupled with a wedging part of a clamping screw (16). A terminal is placed between two broad sides of a clamp receiving space (7). A covering plate (21) is attached with the holder arm to cover a clamping space. Front ends (13) of lateral plates are fixed with the covering plate. A lateral outward part (3) is formed on housing broad sides (22). A housing (2) is provided with a medial stop part oriented to the holder arms. A clamp cover part (19) is coupled with the springy holder arms. The stop part holds the clamp cover part.
