Abstract (en)

[origin: CN203645860U] A controlling device for lamps, exactly the controlling device for furniture lamps, includes at least a connector (16) for the lamps (12), at least a connector (18) for a controlling component (14), a controlling unit (22) and an identifying unit (24). The controlling unit is used for responding to receiving controlling signals from the controlling component (14) to control the connected lamps (12). The identifying unit is used for identifying identification signals received from the controlling component (14), and used for selecting control behaviors of the controlling unit (22) based on the identification signals. A controlling system for lamps includes the controlling device (10). An assembly system of a controlling system for lamps includes the controlling device (10) and a plurality of controlling units with different types, and the controlling units can be connected to the control device (10).
