Abstract (en)
[origin: EP2601856A1] The clasp (1) has a cover (2) connected at an end to a length of strap (4) and at another end to another length of strap (8). A connecting unit includes a terminal link (10) sliding in a longitudinal direction of the clasp. The link includes a push-button (32) that causes a toothed element (34) to move from a position in which the toothed element is in engagement with rack teeth (14) secured to the cover, to another position in which the toothed element is released of its engagement with the rack teeth. The terminal link includes a housing (28) with a spring (30) capped by the push-button.
