Abstract (en)
[origin: WO2013055283A1] The invention relates to intravenous or intracorporeal administration of medical solutions to a patient. In particular it comprises a bag comprising a container (1) having an inlet port (2) and an outlet port (4). The bab is suitable made of a flexible material such as plastic. There are components of a medical solution in concentrated or dry form provided aseptically inside the container. Furthermore, there is provided a sterile filter (3) in said inlet port (2). In a preferred embodiment, the components in the container form a peritoneal dialysis solution when dissolved in water. The invention also relates to a method of intravenous or intracorporeal administration of medical solutions to a patient.
