Abstract (en)

[origin: WO2013054017A1] The invention relates to a fusible holder (10) for an automobile headlight, characterized in that it includes: a lug (20) for supporting the headlight, the supporting lug having a longitudinal shape and being designed to longitudinally oppose a calibrated weight; a base (30) which is to attach to a structural element of the vehicle, and which receives one end of the supporting lug; a means for attaching the supporting lug to the attachment base, said attachment means enabling the relative position of the supporting lug and attachment base to be adjusted at least in the longitudinal direction of the lug; a means for indexing and attaching the supporting lug to corresponding means of the headlight; and at least one rupture area calibrated to break when a predetermined amount of stress is applied.
